

Northwest Hazmat website punch list

Site: <https://nwhazmat.com> | **For:** web vendor / host (current stack: Next.js on Vercel; footer “Powered By Visionary Advance”)

From: Jon Penneman, Northwest Hazmat, Inc. | **Date:** 19 August 2026

Yard / NAP (do not change): 36 West Q Street, Springfield, OR 97477 | Office 541-988-9823 | 24-hour 1-800-597-1323

How to use this list. Work top to bottom. Check each box only when the “Done when” test passes. Do not start a redesign, a new CMS, or a new theme. This is a working Next.js site. The losses are titles, city targeting, hours, schema, licenses, missing spill URLs, leftover domains from the migration, and shop product pages that cannot convert.

Business goals (read before editing copy).

- **Priority 1 — Spill and general hazmat growth across Oregon.** We respond statewide, not only Springfield/Eugene. First keyword family is 24-hour spill response / hazmat cleanup / emergency response *Oregon*. Neighbor cities (Portland, Salem, Eugene, Springfield, Bend, Medford, etc.) belong in service-area copy, schema, and a cities page — not crammed into one title.
- **Priority 2 — Recover online shop sales.** The shop ships nationwide. Sales dropped after the move to this host/rebuild. Treat shop SEO, images, redirects from the old hostname, and Search Console as a sales problem, not a cosmetics problem.
- **Physical location stays Springfield.** NAP, Google Business, schema address, and geo coordinates must be the Q Street yard. “Based in Eugene” on the homepage is wrong.
- **Do not claim SBA 8(a)** anywhere. Live GSA flag is Small Business only. Female-owned is true as a claim; put it in visible About/footer. CCB #141189 is Active and must appear on the site.

A. Location and keyword strategy (do this first — it drives every title)

Do **not** put 40 city names in the H1. That looks like spam and Google will ignore it. Implement service area like this:

Layer	What to do
Address / NAP	Always Springfield, 36 West Q Street. One geo pin: Springfield yard (~44.0489, -123.0225). Delete downtown Eugene coords 44.0521, -123.0868 from ICBM, geo.position, and EmergencyService schema on every template.
Primary keywords	24-hour spill response Oregon; emergency hazmat cleanup Oregon; hazmat services Oregon; diesel / chemical / transport spill Oregon.
Titles / H1s	Lead with spill + Oregon. Name 3–5 major metros in the meta (Portland, Salem, Eugene–Springfield, Bend, Medford), not the whole state in the title tag.
Body / footer	State clearly: 24-hour spill and hazmat response anywhere in Oregon. Shop ships nationwide (UPS).
Schema	LocalBusiness address = Springfield. areaServed = State of Oregon plus the city list below. Shop/Product pages may also use United States as areaServed for shipping.
New page	Create /oregon-spill-response-service-area listing regions/cities we cover. Link it from footer and the new spill landing page.

Oregon service-area list to use on that page and in schema (I-5, valley, coast, central, east — edit if we do not actually roll that far): Portland, Gresham, Hillsboro, Beaverton, Oregon City, Salem, Keizer, Albany, Corvallis, Eugene, Springfield, Cottage Grove, Junction City, Roseburg, Grants Pass, Medford, Ashland, Bend, Redmond, Klamath Falls, Coos Bay, Newport, Astoria, Tillamook, The Dalles, Pendleton, Hermiston, La Grande, Ontario, McMinnville, Woodburn, and “all Oregon / I-5 corridor.” Shop: United States, nationwide shipping.

B. Priority 1 — Spill and general hazmat (growth)

☐ 1. Rewrite titles, meta, and H1s so spill/hazmat Oregon comes first

Now: Homepage title is “NorthWest HazMat | Hazmat Services Eugene Oregon”. H1 is “Oregon’s Leading Environmental Solutions Provider”. Homepage keywords meta targets “nw hazmat eugene”, “mold remediation eugene”, “asbestos testing eugene”. Almost every template says Eugene, not Oregon-wide spill.

Do: Use these (or equivalent, same intent). Keep brand at the end.

URL	New title	New H1
/	24-Hour Spill Response Oregon Hazmat Cleanup Statewide Northwest Hazmat	24-Hour Spill Response and Hazmat Services Across Oregon
/services	Hazmat, Spill Response, Waste & Lab Services in Oregon Northwest Hazmat	Hazmat and Environmental Services — Oregon Statewide
/services/hazmat-services	24/7 Hazmat & Spill Response Oregon Portland to Medford Northwest Hazmat	24/7 Emergency Hazmat and Spill Response in Oregon
/contact	Contact Northwest Hazmat 24/7 Spill Response Oregon 1-800-597-1323	Get in Touch — 24-Hour Spill Line
/about	About Northwest Hazmat Springfield, Oregon Statewide Spill Response Since 2000	About Northwest Hazmat
/services/waste-management-consulting	Hazardous Waste Disposal & Consulting Oregon Northwest Hazmat	keep, add Oregon

Homepage body: replace “based in Eugene, Oregon” with Springfield yard + statewide Oregon response. Meta description must include 24-hour, spill, Oregon, and the 800 number. Homepage keywords meta: spill response Oregon, 24 hour hazmat Oregon, emergency spill Portland Salem Eugene Medford, not mold-first.

Done when: View-source on those URLs shows the new titles/H1s. “Eugene” may still appear as a city we serve, not as our home city.

☐ 2. New emergency landing page for spill (this is the #1 missing URL)

Now: /spill-response-springfield, /emergency-spill-response, /diesel-spill, /services/spill-response all 404. The only panic page is /emergency-mold-removal-eugene-oregon.

Do: Create /24-hour-spill-response-oregon (301 the 404 slugs above to this page).

- H1: 24-Hour Spill Response Anywhere in Oregon
- 800 number first and click-to-call
- What we roll on: diesel, hydraulic, chemical, transport/tanker, unknown substance, storm-drain, facility spills. No invented 5-minute ETAs.
- Yard: 36 West Q Street, Springfield. We respond statewide.
- Link to DEQ/OERS reporting (800-452-0311) as a public-safety note, then our 800 line for cleanup.
- Internal links: header, homepage hero, /services/hazmat-services, footer, shop spill-kit products.
- Schema: EmergencyService + LocalBusiness, 24/7 hours, areaServed Oregon.

Done when: URL returns 200, is in sitemap, linked from header, and the four old slugs 301 here.

☐ 3. Oregon service-area page

Create /oregon-spill-response-service-area with the city/region list in section A. Short intro: we are based in Springfield and run 24-hour spill/hazmat anywhere in Oregon. Do not keyword-stuff. Add JSON-LD areaServed for State of Oregon + those cities. Link from footer as “Oregon service area.”

Done when: Page is live, in sitemap, footer link works, schema lists Oregon.

☐ 4. Hours markup: office vs 24/7 emergency

Now: LocalBusiness openingHoursSpecification is Monday–Friday 08:00–17:00 on every template. EmergencyService nested provider also says Mo–Fr 08:00–17:00. Header copy says 24 Hour Emergency. Third-party directories scrape weekday-only hours.

Do: Keep office hours Mon–Fri 8–5 for walk-in/lab. Add a 24/7 ContactPoint contactType “emergency” with telephone +1-800-597-1323 and hoursAvailable 00:00–23:59 every day. EmergencyService hours must be 24/7, not office hours. Do not mark the business closed Saturday/Sunday in a way that hides us from “open now” emergency search.

Done when: JSON-LD on homepage and /services/hazmat-services shows 24/7 emergency hours plus weekday office hours. Rich-results test does not show Closed on Saturday.

☐ 5. One map pin (Springfield yard)

Now: geo.position / ICBM / EmergencyService = 44.0521, -123.0868 (downtown Eugene). LocalBusiness.geo = 44.0489, -123.0225 (Springfield). Footer is Springfield. ContactPage schema locality has been Eugene.

One coordinate pair on every template: Springfield yard. addressLocality = Springfield. areaServed may list Eugene and the rest of Oregon. Drop Eugene downtown coords everywhere.

Done when: grep of HTML/JSON-LD finds 44.0489 / Springfield and does not find 44.0521.

☐ 6. Footer trust line (licenses that win bids)

Now: CCB #141189 Active is not on the website (Oregon expects CCB number on advertising). GSA MAS 47QRAA26D002R is not on the site. Female-owned is in JSON-LD/Chamber, not in visible About body.

Add to footer sitewide and to About:

CCB #141189 · GSA MAS 47QRAA26D002R · Small Business · Female-owned · 36 West Q Street, Springfield, OR 97477

Link CCB search (id=141189) and GSA eLibrary contract 47QRAA26D002R. Do not add 8(a), WBENC, or WOSB unless we give you a current certificate.

Done when: License line visible on homepage footer without opening schema. About has two true sentences (Springfield since 2000, female-owned, 24-hr Oregon spill, on-site lab).

☐ 7. Header / nav: send spill traffic to spill, not only mold

Homepage header must link Services hub and Training hub (today Training dropdown only lists HAZWOPER 40-Hour). Add a visible “24-Hour Spill Response” button/link to the new spill URL. Do not lead the homepage with mold. Mold stays a service page.

Done when: Header HTML hrefs include /services, /training, and the new spill URL.

☐ 8. Dedication Services → real name + OSRO spelling

Now: Title “Dedication & Ceremonial Space Cleaning”. Body is demolition, excavation, debris, homeless-camp, foreclosure, and an “ORSO” heading (image /img/Orso_img.png) with OSRO in the body.

Rename nav and H1 to what we sell (Industrial demolition, site cleanup & oil-spill response). 301 /services/dedication-services to the new slug. Spell **OSRO** (Oil Spill Removal Organization) once, accurately. Do not claim a USCG class number we have not given you. No ceremonial/memorial copy unless we still sell that.

Done when: Old slug 301s; page source has OSRO not ORSO; title is not ceremonial cleaning.

C. Priority 2 — Shop and online sales (drop since host/rebuild)

Shop is <https://nwhazmat.com/shop> (Stripe). Ships nationwide. After the Vercel/Next rebuild we saw a significant drop in online sales. Fix the conversion and discovery issues below before any more design work.

□ 9. Product images and Product schema

Now: /shop/5-gallon-spill-kit-bucket shows “No image available”; Product schema “image”: null. Several PDPs exist; simulator is call-only.

Every SKU needs a real photo (phone photo of the actual shelf item is fine). Product JSON-LD must include image, price, availability, shipping to US. Alt text names the product (e.g. “5 gallon spill kit bucket”). Do not leave null images. Highest-traffic kits first: 5-gallon kit, Plug N’ Dike, storm drain filter, pop-up pool, spill bags.

Done when: Those PDPs show a photo, schema image is a real URL, Google rich-results test sees Product.

□ 10. Shop SEO copy: nationwide shipping + industrial keywords

Now: Shop title is “Professional Hazmat Equipment & Safety Supplies | Nationwide Shipping” (keep nationwide). Sitemap priority for shop is 0.9 vs services 0.8 — fine, but product pages are thin and not tied to spill jobs.

Keep nationwide shipping in title/meta. Add one paragraph: we ship spill kits and responder gear anywhere in the US; Oregon 24-hour spill customers can also pick up at Q Street. Internal-link each kit from the new spill page and HAZWOPER blog. Add FAQ on /shop: shipping time, pickup in Springfield, what is in the 5-gallon kit.

Done when: /shop meta still says nationwide; at least three product URLs are linked from the spill landing page.

□ 11. Old hostnames, TLS, and migration leaks (likely sales leak)

Now (19 Aug 2026):

- <https://nwhazmat.com> works (HTTPS + HSTS).
- <https://www.nwhazmat.com> 308 → <https://nwhazmat.com>
- **<https://northwesthazmat.com> TLS handshake failed** (apex). <http://northwesthazmat.com> and <https://www.northwesthazmat.com> do reach nwhazmat.com.
- Search still lists <https://northwesthazmat.com> and leftover <https://northwesthazmat.visionaryadvance.com> (staging; DNS NXDOMAIN from our check).
- Google-site-verification meta is the placeholder `your-google-verification-code` (also Yahoo `y_key` / Yandex placeholders).
- Issue a valid TLS cert on apex northwesthazmat.com and 301 *all* [http/https/www](http://https://www) variants to <https://nwhazmat.com> (301, not 308 if you can; 301 is safer for SEO of the old brand URL).
- 301 northwesthazmat.visionaryadvance.com → <https://nwhazmat.com>. Remove staging from any sitemap. Request removal in Search Console if it reappears.
- Paste the real Google Search Console verification code (or DNS TXT). Delete fake Yahoo/Yandex keys if unused.
- Confirm GA4 (G-PSPP37JFES or the property we actually use) fires on /shop, PDPs, and /checkout success. Send us a screenshot of shop pageviews before vs after launch if you have it.
- Confirm Stripe checkout, carts, and confirmation emails still work on mobile. Do not index /checkout: set `noindex,follow` (today it returns 200 `index,follow` even though `robots.txt` Disallows /checkout).

Done when: `curl -I https://northwesthazmat.com` returns 301 → <https://nwhazmat.com> with a valid cert. Staging host 301s. GSC property is verified. /checkout is `noindex`. A test kit order can be completed.

□ 12. Speed: compress the 2 MB images (hurts shop and mobile)

Now: About_Header.jpg 2.73 MB, Trucks.jpg 2.73 MB, Areas_bg.png 2.36 MB, Need_Train.jpg 2.27 MB. Homepage icons `alt="undefined Icon"` (8). OG image claims 1200×630 but points at a 31 KB file.

Compress/serve WebP or resized Next/Image sources under ~200 KB for heroes. Real alts on the eight icons. Fix OG to a real 1200×630 image. Empty About counters (“+ Years”, “k Clients”) — fill with numbers we approve or remove the counters. They look broken and cause layout shift.

Done when: those four files are not 2 MB; alts are not “undefined”; counters are gone or show real numbers we supplied.

D. Priority 3 — Training, mold cannibalization, citations

☐ 13. Training menu, calendar line, Course schema

Eight course URLs exist in the sitemap. Header only links HAZWOPER 40-Hour. No class dates. Course schema on the 40-hour page has courseWorkload PT8H (8 hours, not 40). Min group of 5 is stated.

Header Training menu: hub + all 8 courses. On /training and each course, one line: “Scheduled for groups of 5+ at 36 West Q Street, Springfield; call 541-988-9823 for the next open date” (or real dates if we send them). Fix PT40H on the 40-hour course.

Training titles may keep Eugene & Lane County plus Oregon.

Done when: all 8 courses are in the nav; PT40H is correct; a next-date/call line is visible.

☐ 14. Mold: one URL, not two competing panic pages

/emergency-mold-removal-eugene-oregon and /services/mold-remediation are both indexable. Panic page uses fake-precise ETAs (Springfield 5 min, downtown Eugene 12 min) and trains Google that “emergency” = black mold in Eugene, which fights spill growth.

Keep /services/mold-remediation as the canonical mold page. 301 the emergency-mold slug to it (or noindex the panic page). Soften ETA claims. Mold may mention Eugene–Springfield homeowners; it must not outrank spill in the homepage or header.

Done when: only one mold URL is indexable; homepage does not lead with mold.

☐ 15. Lab page city + accreditation

Lab page says local lab in “Eugene, Oregon.” No ORELAP/NVLAP/AIHA number on the site. Chain-of-custody PDF exists.

Say Springfield (Q Street) lab, serving Oregon. If we have an accreditation number we will send it — put it on the page. If not, do not imply “certified lab” without the program name. Keep CoC link.

Done when: lab page city is Springfield; no unsourced “certified lab” badge.

☐ 16. Sitemap, robots, Search Console hygiene

Sitemap lastmod mostly 2026-07-15; homepage changefreq yearly (too cold). One fetch of sitemap.xml returned 500 (flaky).

/employment-application is index, follow.

Sitemap must 200 consistently; include new spill + service-area URLs; drop or noindex thin utility pages if they compete (checkout already noindex). Homepage changefreq weekly until titles settle. Submit sitemap in Search Console after verification. Optional: noindex the employment application if we do not want it competing.

Done when: sitemap.xml always 200; new URLs listed; GSC fetch succeeds.

☐ 17. Citation cleanup (only the broken ones — no blast)

Update these to https://nwhazmat.com, Springfield NAP, Small Business not 8(a), hours that match section 4:

- MapQuest listing (still says SBA 8(a) and http://www.nwhazmat.com)
- LinkedIn company page (website still northwehazmat.com; founded 2002 vs 2000; “1 employee” is false)
- GSA eLibrary web address is http://nwhazmat.com — https if you can edit
- Unilocal hours (8:30–5:30 all 7 days — wrong)

Do not buy a 200-directory citation package.

Done when: those four listings match NAP + https://nwhazmat.com + no 8(a).

E. Do not do

- Do not rebuild the site, change CMS, or restyle the theme.
- Do not stuff every Oregon city into the title tag or H1.
- Do not change the legal address off 36 West Q Street, Springfield.
- Do not mark the company closed nights/weekends if the 800 line is staffed.
- Do not claim 8(a), WOSB, WBENC, OSRO class numbers, or lab accreditation numbers we have not provided in writing.

- Do not add national Google Ads or a chatbot.
- Do not write more “what is mold” blog posts. Five posts already exist. Spill/hazmat pages first.
- Do not invent dispatch times (no “2-minute dispatch,” no minute-by-minute ETAs).
- Do not leave staging (visionaryadvance) indexed.

F. Suggested order this week

1. TLS/301 on northwest hazmat.com + staging + real Search Console code (#11)
2. Titles/H1s (#1) and geo/hours schema (#4–5)
3. Spill landing + service-area page + header link (#2, #3, #7)
4. Footer licenses (#6)
5. Shop images + noindex checkout + compress heroes (#9, #11, #12)
6. Dedication/OSRO rename, training nav, mold 301 (#8, #13, #14)

Items 16–17 can follow immediately after GSC is verified.

G. Sign-off

Item #	Done (date)	URL or screenshot	Vendor initials
1 Titles/H1s			
2 Spill landing			
3 Service-area page			
4 Hours schema			
5 One geo pin			
6 Footer licenses			
7 Header links			
8 Dedication / OSRO			
9 Shop photos/schema			
10 Shop copy/links			
11 Domains / GSC / checkout			
12 Image weight / counters			
13 Training nav/schema			
14 Mold canonical			
15 Lab city			
16 Sitemap			
17 Citations			

Questions on copy: confirm with Jon before publishing claims about certifications, ETAs, or cities we do not actually serve. Nothing in this list authorizes a redesign.
